

GitHub Copilot Training Database Focus

Andrew Scoppa

GitHub Copilot Fundamentals

Let's start with a high-level overview of GitHub Copilot

- GitHub Copilot is there to enhance daily work
 - Like a smart assistant or mentor by your side
- Draws context from text & code in open tabs
- Powered by OpenAI
 - Copilot uses a transformative model
 - Think of something like Google Translate
- Trained on large datasets to ensure accuracy
 - It even can help with HTML and markdown!
- Available as an extension to IDEs and editors

Providing Context

To help Copilot generate accurate suggestions:

- Add a top-level comment block describing the purpose of the file
- Provide detailed comment block for operations
- Have related content open in other tabs

```
/*
This file demonstrates Microsoft T-SQL commands
crafted using Copilot.
*/

-- If database 'Inventory' exists, drop it
IF EXISTS (SELECT * FROM sys.databases WHERE name =
'inventory')
    DROP DATABASE inventory;

-- Create a new database named 'Inventory'
CREATE DATABASE inventory;

-- Use the database
USE inventory;

/*
Generate a table named 'products' with the following
columns:
- id: an integer that is the primary key
- name: a string that is not null
- price: a decimal that is not null
*/
CREATE TABLE products (
    id INT PRIMARY KEY,
    name VARCHAR(255) NOT NULL,
    price DECIMAL(10, 2) NOT NULL
);
```
